

2010-2011 SCB 8th Grade Summer Math Assignment

Each student attending the SCB 8th grade in 2010-2011 received a **RED** Louisiana LEAP 21 Test Prep **Workbook**. (Returning students were issued the workbook during the school year and were informed of the assignment on Monday, May 17, 2010. There are copies of the **workbook available for NEW STUDENTS in the school office.**) In that workbook students should complete **pgs.43-58 & pgs.67-80**. This is a good review of skills covered over the 7th grade year. These problems come from the practice tests for various state tests including the **TERRANOVA & SAT 10**. Many of these skills will be assessed in the spring on the **LEAP TEST**. This assignment should be completed for the start of school in August. It will be collected for a **30 point** homework/quiz grade and reviewed in class. The assignment will be **graded on completeness and effort**. Students should make their best attempt and spend approximately one or two minutes per problem (no more---do not dwell on problems). It is my strong suggestion that students should complete small groups of problems each day and should not attempt to finish all assigned problems in one sitting. **Work must be shown** in the workbook itself or on loose leaf which can be stapled to the workbook. The work itself will be reviewed and is an important part of the assignment. In order to **earn full credit work must be shown.**
